

Gloria Nduka
ITP 303 Final Project Proposal
Foodzine

Topic: This website will provide recipes of all types of cuisines from different parts of the world. Users will be able to add recipes of their own to the website and share with other users, favorite their favorite recipes, provide feedback/tips/comments under other recipes so other users can view that, and will be given random recipes if indecisive of what to make.

Audience: The intended audience is Male and Female in the ages from 10years old to 70+ years old; anyone who is hungry and is looking to spice up their food selection/palette.

Design & Style: I am thinking about going for a more simple look and feel for this website. The color codes I am using are #488286, #DAE0F2, and #FFFBFE. The websites that inspired my design are:

<https://tasty.co/>

<https://dribbble.com/shots/5531056/attachments/1196515?mode=media>

I like the simplicity of this page and will carry this throughout my website.

<https://dribbble.com/shots/6514009-Topic-User-Profile/attachments/6514009-Topic-User-Profile?mode=media>

My profile pages will be somewhat similar to this page. Instead of the links "Photographs" and "Videos" in the top right, it will be "Favorites" and "My Recipes"

<https://www.awwwards.com/sites/handy-handmade-marketplace-woocommerce-theme>

Scope: I am planning on having 6 pages. The 6 pages are:

Home Page

Results Page

Details Page

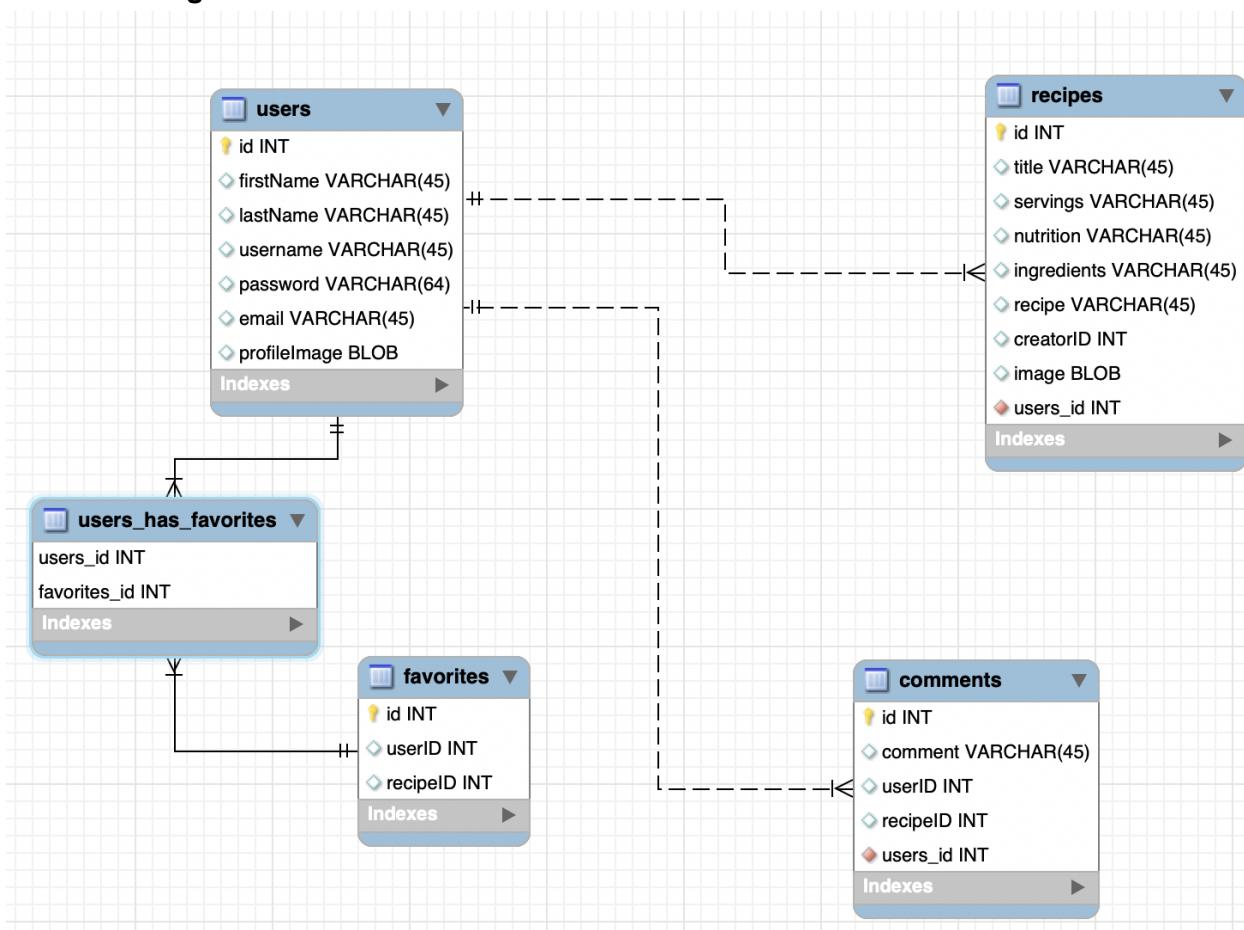

Profile Page

Login/Register Page

Add A Recipe Form

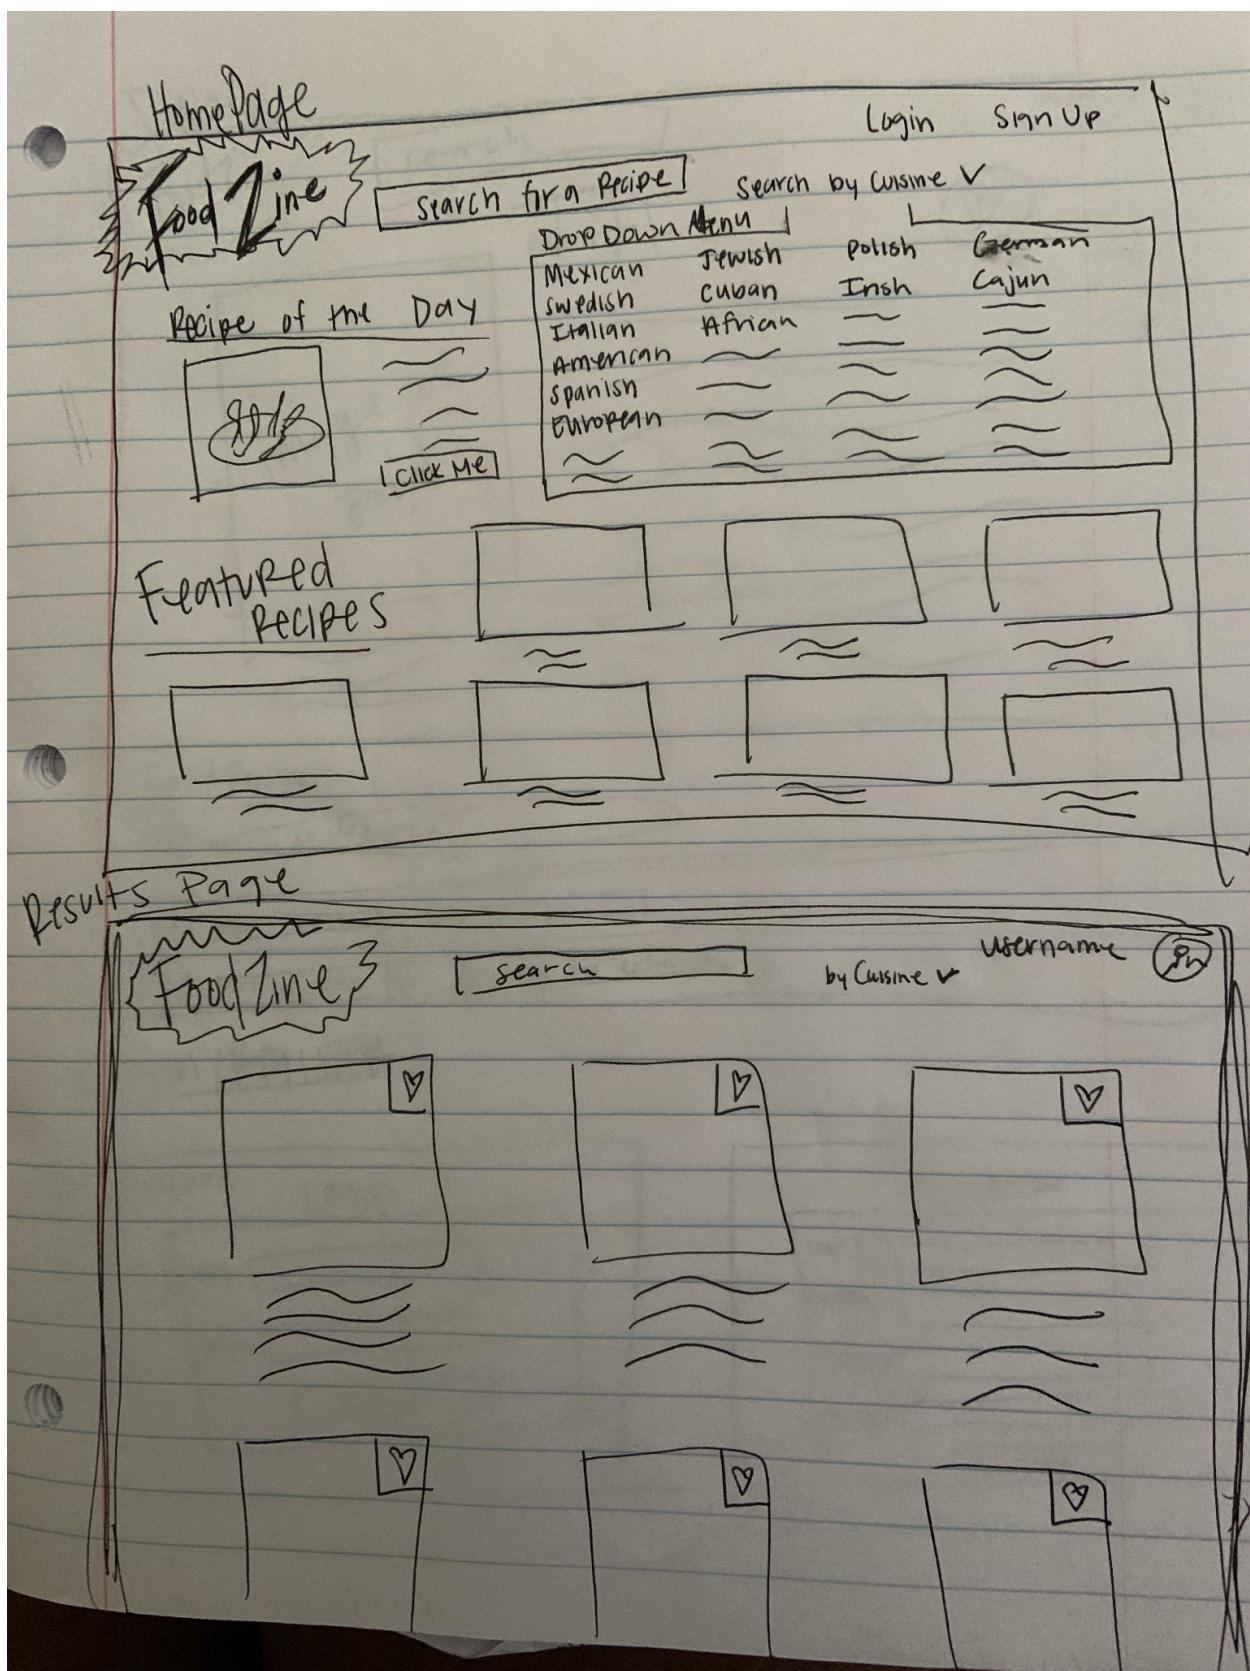

Database: I will store user login/registration details (name, username, password, email, image), user's recipes with image, user's favorite recipes with image, and comments/replies/feedback under each recipe post. This data is coming from the user itself then storing it in the database. I will also pull recipes from an API, Edamam, and display recipes from here to the user.

Database Diagram:

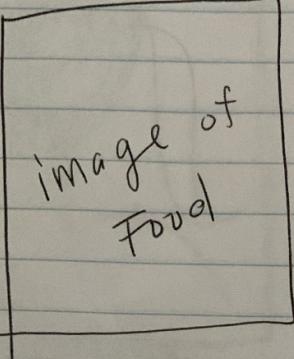

Users and Favorites have a many to many relationship because users can have many favorited recipes. Users and Comments have a one to many relationship; one user can have many comments. The Recipes and Users have a 1 to many relationship; 1 user can create many recipes.
